## Work Experience

**moreof.me** 10/2024—02/2025

I created a web-app designed for iPhones, which allows users to create their personal space to extend beyond socials. Client-side written with Vite & SvelteKit is capable of compressing videos and images inside of browser. I've made a script to unblock Google Analytics in adBlockers. Real-time statistics implemented with TimescaleDB.

🔗 Svelte PostgreSQL Google Cloud Run

**Session-related** 2024—2025

I'm fascinated by the Session messenger. For several years I've been helping build it: contributing to source code, creating the first bot framework, a blockchain explorer, and reimplementing community server on JavaScript. I've published an experimental native macOS client written in Swift and a web client running Session in browser.

🔗 Node.js Electron.js Swift Monero Bun

**Freelance** 01/2022—05/2022

The goal was to build an automatic system for dating platform that could detect and remove duplicate profiles using hash photos recognition, filter out blacklisted topics and integrate payment gateway. I have also created an inline bot for admins and deployed all 30+ instances to a chosen cloud machine by the client.

🔗 TypeScript VK API MongoDB Yookassa API

**Freelance** 09/2022—09/2024

Darknet analytics platform with Telegram posts aggregator. Designed to be modular, it uses Webpack Module Federation (micro-frontends) to be deployed across multiple replicas. Automatic posts tagging with GPT. DeepL API to translate content to 23 languages for SEO. End-to-end encrypted file-sharing platform with file previews.

🔗 React Next.js FSD OpenAI MongoDB S3 Rails Telegram

**Freelance** 05/2022—09/2022

I was working on a B2B platform for entrepreneurs. Specifically, I was building frontend part of it: advertisements landings, a control panel and a CRM. I added OAuth and used D3 to render charts. Being a frontend team lead, I mentored a junior developer on how to write better code, did a lot of code review, and team communication.

🔗 Bootstrap Material React Next.js Visk Swagger Apollo

**Joom** 11/2021—12/2021

Joom is a Latvian group of e-commerce and fintech companies. I was hired by their designers team on contract to create a Figma plugin that would allow them to instantly convert cross-platform designs between each other to use OS native features, such as Android and iOS fonts, UI elements and other components in settings.

🔗 React in Webpack TypeScript Redux

## Soft Skills

I work both in team and individually. I always communicate in a professional manner. I have a problem-solving mindset and can identify potential vulnerabilities and edge cases. I focus on designing the best code architecture.

I'm proficient with Trello, Jira, Slack, time management tools (Toggl), and CI. I understand the basic Git workflow and source code branching.

I prefer quick communication via chats over emails and calls.

- 🇷🇺 Native
- 🇺🇸 Speak very well

## Hard Skills

- Svelte & Vite**  
I'm working with Svelte 5 (runes) I can also work with Svelte 4
- TailwindCSS**  
1,5 years of experience Including Forms, Typography
- Docker**  
Creating and deploying images, Docker Compose, GHCR, GCR
- React & Next.js**  
3,5 years of expertise I prefer Svelte over React
- PostgreSQL**  
I know SQL but prefer Drizzle Familiar with serverless neon
- RabbitMQ**  
Have practical experience for backend microservices
- TypeScript**  
Proficient with generics and I can write type utilities
- MongoDB**  
3 years of experience I prefer PostgreSQL
- GraphQL**  
Have used as REST alternative Familiar with types generation
- 180+ repositories on GitHub since 2020 More than 100 public projects 20+ projects published to npm
- Practiced deployment to VM, dedicated, serverless, Google Cloud Run, Cloudflare, GitHub Pages, Netlify, Onion Hidden Network
- I do performance optimization of all web apps for Lighthouse and I strive to improve SEO. I have in-depth experience with frontend architectures
- I'm knowledgeable in selfhosted npm registries and orgs, selfhosted Git, and SSO servers
- I follow DRY, KISS, SOLID principles when writing code and prefer a consistent coding code style and project design
- I am tolerant of mistakes during code reviews and capable of making complex technical decisions

Preferred contact method

## Education

High School Equivalent

Opted for career advancement instead of pursuing higher education

I've been programming since I was four and have independently mastered IT

## Salary expectations

100 000\$ annually or 50\$ per hour

## Relocation

Ready to relocate with a worker visa Considering Europe, Canada and USA
